FIVE DEAD IN DAKOTA BLIZZARDS

(By Associated Press) BISMARCK, N. D., March 17.—Five known dead and thousands of dollars' damage to property was the toll of a two days' blizzard, the worst storm in thirty years. The storm today is reported gradually subsiding. One girl gave her life to save her sister and brother, while the heroic efforts of another youth to bring help proved futile and he and three brothers perished on the prairie.

MAY BE BODY OF MRS. GRIGSBY

Positive identification of the body of a woman taken from the Truckee river at Reno early in January is believed to have been established by information received from Berkeley. She is believed to have been the wife of E. S. Grigsby, who has been missing several months. Information received by the Reno chief of police shows that when Mrs. Grigsby left Berkeley on December 5, 1919, she was attired almost identically as was the woman whose body was found in the river.

The wrist watch worn by Mrs. Grigsby when she left Berkeley answers the description exactly of the watch found on the dead woman. The clothing, particularly the shoes, worn by Mrs. Grigsby, also tallies with that found on the dead woman. Mrs. Grigsby was in Reno shortly after the left Berkeley and was interviewed by Chief Kirkley. She told him she was on her way to Tonopah and left the police station saying that she was going to the train.

Three weeks ago persons were in Reno looking for her. At that time it occurred to Chief Kirkley that the woman found in the river might have been Mrs. Grigsby and he asked that a description of the clothing she wore at the time she left Berkeley be sent to him.

The body taken from the river was identified the day after it was found as that of Mrs. Sarah Haley of Reno. It is known in Tonopah that Mrs. Grigsby was stopping at the River side hotel in Reno December 4, 5 and 6, as she sent telegrams here in the latter date. The messages were evidently written by a person under great mental tension or completely demented. An answer was sent asking for further information as to the make the person clear. The telegrams were returned unfilled through inability to find Mrs. Grigsby. The telegrams were to the effect that certain persons were shadowing the receivers of the messages and enjoying the utmost tension. Mr. Grigsby will leave this evening for Reno. He says there should be no trouble identifying the wrist watch as it was the one he gave his wife and a gift which she prized highly. In the event that there is any doubt about the watch the dental work will furnish conclusive proof.

Tolicha has made its first sale through the consummation yesterday of a bond and lease between Ed. Yeiser and Ed. S. Harney, locators and owners of the original discovery and Chicago capitalists represented by Thomas A. Hanley of Chicago, a brother of Ed. S. Harney who left the Windy City today with \$5,000 cash to make the first payment. The price mentioned in the bond is \$225,000. One year is given the buyers in which to assume full rights by paying the balance. The transaction was rendered doubly interesting by the announcement that the Hanley brothers also contracted to buy "Lumber" Yeiser \$75,000 for his one-third interest. The next payment becomes due in six months and the optionees must complete the deal inside of one year by paying the balance in cash. Thomas A. Harney, through whose office the sale was made, is a brother of Edward Harney who has had extensive experience in the mining game in Montana and who has examined the property shortly after the big strike reported in The Bonanza last month was made.

This is the property for which the mining interests offered \$115,000, with a \$5,000 payment and the balance in eighteen months with a guarantee that \$100,000 would be spent in equipping the mine. While the sale was pending the Chicago men about the Loring offer one better and the deal was closed. The tunnel which the locators have been driving since below as in 120 feet and has already penetrated one ledge for a distance of 15 feet and it is estimated that another 18 feet will cut the ledge carrying best values. The ledge, like the general average better than what was found on the surface.
